crm@swashindia.com

We use the finest quality raw materials, cutting edge technology and stringent quality control methods to ensure the labels we provide you with are of the highest quality. This is long and continuous process which is facilitated by constant up gradation of machineries, techniques and mindsets. We have a talented and curious team who constantly keep ourselves updated with the latest trends and technology in the whole world of Self Adhesive Labels industry and we are willing to change with time.

We have a vast range of material options available to suit any application or desired look. We have the expertise to help you choose the material that is right for you. Our extensive range covers all bases, right through to even the most unique requirement.

Label Materials Gallery

Direct Thermal Labels

This type of label has a special heat-activated layer where a print image is formed when heat from the print head is applied. Eliminating a printing ribbon makes for easier media loading and a lower cost per label. **Note:** Direct thermal labels are primarily used for short term use. They will eventually fade or brown with age and will turn black if exposed to heat or strong sunlight.

Chromo Labels

We make chromo labels for a wide variety of clients, and our team has expertise in designing solutions that work. We also offer a convenient range of chromo labels and thermal transfer ribbons

Synthetic Labels

Synthetic label materials can be PP, PE, PO or PVC based white or clear film materials. They provide excellent moisture and chemical resistance. The finishes are commonly glossy and provide an excellent surface for the ink to adhere to giving bright and dense colours. The matt finished materials are generally used in the logistics sector where the matt surface is better suited to thermal transfer printing.

Tamper Proof Labels & Tamper with Void (SAR-60)

Prevent tampering and label swapping with destructible and void patterned security labels. After applying, these labels become impossible to remove cleanly, leaving behind adhesive or material that indicates clear intrusion. Durable solution for indoor and outdoor applications. Our security labels are made-to-order in custom full color, graphic, barcoded or simple text prints or blanks, all in customizable sizes and shapes.

Round Labels Coloured

Suitable for inkjet or laser printers, photocopying and handwriting.

A4 Labels (White & Fluorescent)

A4 fluorescent red paper labels, with permanent adhesive in a wide range of sizes suitable for laser/copier and inkjet printers.

Glue Dot

These glue dots can help sticking balloons on walls, ceiling, windows, cars, and be used on lots of DIY projects, scrap booking, handmade invitation, gift cards and so on.

Piggy Back Labels

Piggyback labels combine two layers. The bottom layer forms the back and adheres to the product. The top layer can be peeled off and reapplied to a surface of your choice.

Half Cut Labels

This half cut sticker label can be use on bank cheque book & creasing, bending on wedding cards & book title creasing.

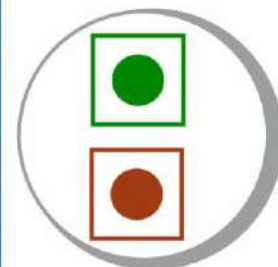

Bottle Gripper Label (Silver Metallised)

It is then wrapped around the circumference of the bottle top. The patent pending strip prevents the top from rattling loose during shipping.

Shipping & Marking Labels

Reduction in packing time, cost of packing materials, and gross weight for goods which can be packed in cardboard cartons and containerized for shipping.

Foods Labels (V/NV Logo)

Food labels carry useful information to help you make good choices about food.

Customized Labels

Great For Business Logos or Labels, Gifts. Bottle Labels Thank You Notes Box Labels And Many Other Uses. Customize Your Own High Quality Circle Stickers, By Using Text !
